**DETAILED ACTION**

***Response to Amendment***

1. Applicant's amendment filed on 5/22/09 has been entered.

Claims 25 and 36 are canceled.

Claims 15- 24, 26- 35, are pending in the application.

***Response to Arguments***

2. Applicant's arguments filed on 5/22/09 have been fully considered and are persuasive see remarks on page 8, with respect to claims, 15-21, 26-32 the rejection under 102 (b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn and 15- 24, 26- 35 are now allowed.

***Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance:

Claims 15- 24, 26- 35 are allowed and renumbered as 1-20 .

Applicant's arguments (see page 8, of the remarks filed on 5/22/09. The prior art of record Ohnishi et al., (US. 5,463,462) Ohnishi discloses using a collimated, parallel laser beam for inspecting the honeycomb structure. See Fig. 1 and col. 4, lines 41-49 of Ohnishi. Ohnishi uses this laser beam to detect defects in partition walls such as interstices 58, and can also detect through holes 56. See Fig. 6 and col. 9, lines 42-58 of Ohnishi. Ohnishi does not disclose or suggest using diffusion light and further does not disclose or suggest an ability to inspect the surface unevenness of the partition walls of the honeycomb structure, as recited in independent claim 15, and similarly recited in independent claims 17, 26 and 28. Still further, Applicants

respectfully assert that Ohnishi does not disclose or suggest allowing the exited diffusion light to pass through a translucent screen, as recited in independent claim 15, and similarly recited in independent claims 17, 26 and 28. Ohnishi's lenses 34 and 38 and reflectors 36 and 40 correspond to the recited screen. Applicants respectfully disagree. Ohnishi, which, as discussed above, merely discloses the use of lens and reflectors, teaches away from using Ohnishi's parallel laser beam apparatus in combination with a screen. See Ohnishi, col. 1, lines 56-62, where Ohnishi discloses the Shortcomings of using a parallel laser beam in combination with a screen. Ohnishi discloses that in such a combination the light beam passes straight through the through holes so that the pattern cannot easily be distinguished from a pattern which is formed on the screen by a light beam that has passed through the interstices as commonly included in each of the independent claim 15, 17, 26 and 28, the prior art of record fails to teach either singularly or in combination, fails to anticipate or render the above limitations obvious.

4. Any comments considered necessary by applicant must be submitted on later than the payment of the issue fee and to avoid processing delays should preferably accompany the issue fee. Such submissions should be clearly labeled, comments on statement of reasons for allowance.
